Leader Election

Leader election is a fundamental problem in the area of distributed computing. We have designed protocols for this problem by combining techniques from several existing protocols in a modular fashion. Each of these protocols is structured as a sequence of phases. The phases were designe independently and then composed using sequential composition. There are several problems in distributed computing that have been shown to be equivalent to leader election in terms of complexity. Our solutions lead to improvements in the complexity of these problems as well.

- Leader Election in the Presence of Link Failures , IEEE Transactions on Parallel and Distributed Computing, 7(3), March 1996. A preliminary version appeared in the ACM Symposium on Principles of Distributed Computing, August 1994.
- Leader Election in Complete Networks , SIAM Journal on Computing, 26(3), June 1997. A preliminary version appeared in the ACM Symposium on Principles of Distributed Computing August 1992.
- Leader Election Using Sense of Direction , Distributed Computing, 10(3), 1997. Some result appeared in the International Conference on Parallel and Distributed Computing Systems, October, 1994.
- Leader Election in Faulty networks with Sense of Direction, IEEE Transactions on Reliability 46(1), 1997 (with Yi Pan).
- Selection on k-dimensional Meshes with Multiple Broadcasting, Computer Journal, 39(2), 19 (with Yi Pan and Mounir Hamdi).
- Real-time Leader Election , Information Processing Letters, pages 57-61, 49, 1994.
- Efficient Leader Election in Complete Networks IEEE International Conference on Distribute Computing Systems, May 1991.

Spanning Trees

Spanning trees are typically used to provide multicast communication among a set of nodes. We have designed an algorithm for dynamic reconfiguration of multicast spanning trees in the presen of node failures, link failures and addition or deletion of group members. We have also designed efficient algorithms for construction of minimum cost spanning trees.

- A Highly Asynchronous Minimum Spanning Tree Protocol , Distributed Computing, 8(2), 199 (with Arthur Bernstein).
- Reconfiguration of Spanning Tree algorithms in Networks in the Presence of Node Failures, IEEE International Conference on Distributed Computing Systems, June 1993. (with K. Ravindran and P. Gupta)
